→ Web Storage

→ Kanban Board → Data Persistence

Local Storage is a web storage mechanism that allows website and web applications to store and access data in the user's browser with ==no expiration date.==
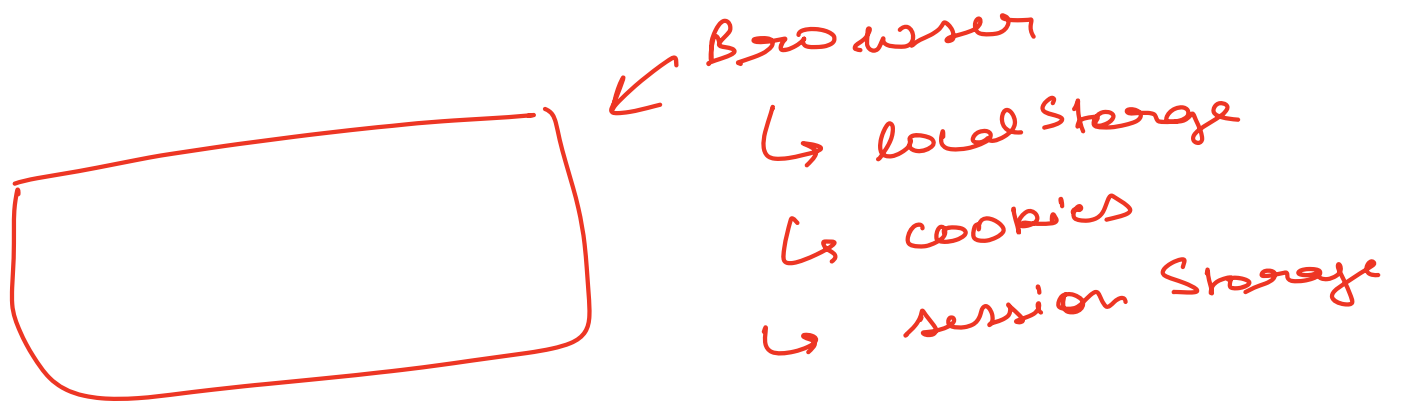

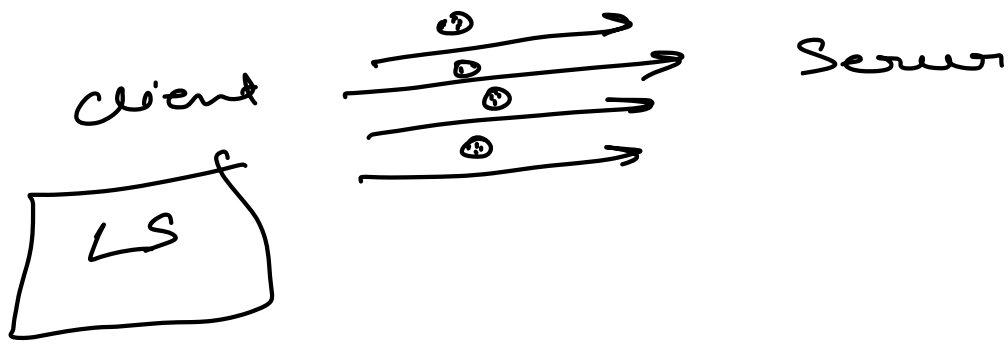

Even if you close the tab / browser and re-open it, data will still be there.

Session Storage also can be used for data persistance. Only difference is there going to be a expiration to date. Session storage expires on tab close.

Cookies

Limitation of local Storage

→ Size → 5 to 10 MB depending on browser

→ Sync API

→ No Data Expiration

→ Security
